Student Learning Objectives

Missouri school leaders are currently making preparations to implement Student Learning Objectives for the 2015-2016 school year, as one component of their educator evaluation system. A Student Learning Objective is a process in which teachers establish a measureable goal of academic growth and monitor such growth throughout an interval of instruction. In order to execute SLOs successfully, teachers work through the following steps:

- 1) Gather and analyze student data on specific learning content.
- 2) Use collected data to establish student growth targets for every student.
- 3) Formatively assess student progress in order to effectively adjust instruction.
- 4) Monitor student progress to determine if each student is meeting set target.

How does the SLO Tracker work?

Teachers will be looking for a way to monitor student growth towards identified targets. The SLO Tracker provides a user-friendly, clean and efficient way for teachers to input student data and receive immediate feedback on whether or not students are making expected gains in their learning.

The SLO Tracker will provide an opportunity for schools to capture and archive student learning data in order to make data-driven decisions to enhance the quality of curriculum, instruction and assessment practices.

Teacher Benefits:

User-friendly way to enter and monitor student learning information.

Immediate feedback on student achievement levels in order to make sound instructional decisions.

Leader Benefits:

Easy administrative access to view and reflect on teacher and student level progress.

Archived data to make informed decisions regarding curriculum, instruction, and assessment adjustments.

Educator evaluation data on student growth is captured in one location.

"We have used Web School Tools products for several years and love the results. The Web School Tools are easy to use and manage. We are planning on using the SLO Tracker tool this fall. It seems very user friendly and will cut our data tracking time in half."

- Dustin Barnes (Principal)

Features

SLO Tracker is a web-based program which offers teacher and school leaders the following services:

- Web-based solution of data tracking to ease the process of SLO tracking.
- All SLO data available in one easy to use location.
- Dashboards for administrators and teachers to easily see summary of data.
- Software guides teachers in tracking SLO and setting individual student targets.

Opportunities for Customization

- We can customize the system to add or change any feature that will help make the process of SLO tracking more efficient.
- Created by teachers who are always looking for ways to do their job better. New ideas will be encouraged and the system will continuously improve.
